

About Us

Our Practice has its roots with the original Land Survey practice formed in the 1930's

For over 75 years, the firm has offered professional Land Surveying and Planning services to private & public clients and we pride ourselves in the survey records that we have kept for virtually every project since the firm's formation. These records assist us in quickly researching a project and determining the survey beacons and conditions in a particular area.

Social Responsibility

We endorse the principles of practices such as affirmative action, employment equity and equal opportunity and have made substantial progress in mentoring our emerging staff and providing the opportunity to develop skills and experience in our core fields.

We have recognized the need to provide applicable education at a grass-roots level to facilitate skills and capacity development in surveying, GPS & CAD, work flow and data management.

We employ, develop, recognize and reward people who are committed to Ongoing Learning, Innovative Problem Solving, Team-Work, Professionalism and Service Excellence in the workplace and in their communities.
